ED 113 792

EA 007 568

AUTHOR Forwood, Bruce S.
TITLE A Selective Bibliography of Building Environment and Service Systems with Particular Reference to Computer Applications. Computer Report CR20.
INSTITUTION Sydney Univ. (Australia). Dept. of Architectural Science.
REPORT NO CR-20
PUB DATE 72
NOTE 31p.
AVAILABLE FROM Professor H. J. Cowan, Department of Architectural Science, University of Sydney, Sydney, 2006 Australia (\$0.70)

EDRS PRICE MF-\$0.76 HC-\$1.95 Plus Postage
DESCRIPTORS Acoustical Environment; *Bibliographies; *Building Design; *Computer Programs; Environmental Research; *Facility Guidelines; Facility Requirements; Lighting Design; Mathematical Models; Performance Specifications; *Simulation; Thermal Environment; Visual Environment

ABSTRACT

This bibliography has been produced as part of a research program attempting to develop a new approach to building environment and service systems design using computer-aided design techniques. As such it not only classifies available literature on the service systems themselves, but also contains sections on the application of computers and documentation of environmental research. There is also a selective list of computer applications to other related areas of building design and material intended to provide a background to the mathematical and analytical procedures involved. The literature is classified into the following categories: (1) mathematical methods and analytical techniques, (2) computer applications, (3) integrated models on building performance, (4) building environment and service systems, (5) thermal environment and air conditioning systems, (6) visual environment and lighting systems, (7) acoustic environment, and (8) vertical transportation. (Author/MLP)

* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

REPORT SERIES

With Number 84 the series of Department Bulletins ceases.
In lieu the Department is issuing 7 series of Reports under the following headings: -

<u>Report Name</u>	<u>Prefix</u>
1. COMPUTER REPORT	CR
2. EDUCATION REPORT	ER
3. MODELS LABORATORY REPORT	MR
4. PHYSICAL ENVIRONMENT REPORT	PR
5. STRUCTURES REPORT	SR
6. TIMBER REPORT	TR
7. GENERAL REPORT	GR

Each report is allocated an International Standard Book Number (ISBN). At the back of this report will be found a list of Report titles.

Price: \$Aust 0.50; \$US 0.70; £ 0.25.

Copies of this and other Reports are available from:

Professor H. J. Cowan

A SELECTIVE BIBLIOGRAPHY OF BUILDING ENVIRONMENT AND
SERVICE SYSTEMS WITH PARTICULAR REFERENCE TO COMPUTER
APPLICATIONS

by

BRUCE FORWOOD

COMPUTER REPORT CR20

1972

The application of computer methods to architecture is no longer an infant art. Having established itself first in the more mathematically oriented domain of the structural engineer, the computer is now being applied to nearly every aspect of building design and production. One of the more recent applications has been in the field of building service systems design and the investigation of the quality of the internal environment. Development of applications in this field has taken place in two streams, sometimes parallel and often inter-related. In both the U. S. and the U. K., these streams have been the development of software systems for practical use by large architectural and engineering firms, and the development of environmental research programmes at universities and research institutions. The latter of these two streams has been fairly well documented as part of individual research programmes, whereas the tendency has been for the systems produced in practice to be poorly documented. However, at the present time, enough documentation exists to necessitate its classification into a bibliography.

This bibliography has been produced as part of a research programme attempting to develop a new approach to building environment and service systems design using computer-aided design techniques. As such it not only classifies available literature on the service systems themselves, but also contains sections on the application of computers and documentation of environmental research. As well, there is a selective list of computer applications to other related areas of building design and also material intended to provide a background to the mathematical and analytical procedures involved. The literature has been classified into the following categories.

1.	Mathematical Methods and Analytical Techniques	3
2.	Computer Applications - general	4
3.	Integrated Models on Building Performance	7
4.	Building Environment and Service Systems	8
	4.1 General References	8
	4.2 Computer Applications	10
5.	Thermal Environment and Air Conditioning Systems	11
	5.1 General References	11
	5.2 Computer Applications and Mathematical Methods	16
6.	Visual Environment and Lighting Systems	21
7.	Acoustic Environment	23
8.	Vertical Transportation	24
	8.1 General References	24
	8.2 Computer Applications	25

Of necessity, the bibliography must be selective owing to the enormous amount of available literature. In addition to the specific references given here, the reader is referred to the following list of journals and periodicals.

Australian Refrigeration Air Conditioning and Heating, official publication of the Australian Institute of Refrigeration, Air Conditioning and Heating, Inc. (A. I. R. A. H.) and associated bodies.

Building Science, an international journal of research in building science; published quarterly by Pergamon Press.

Building Science Abstracts, summaries of papers published in selected journals worldwide; published by the Building Research Station, Watford, England.

Heating Piping and Air Conditioning, mainly concerned with practical hardware systems design; published by the Reinhold Publishing Co. Ltd.

I. H. V. E., the Journal of the Institution of Heating and Ventilating Engineers, London.

Illuminating Engineering, Journal of the Illuminating Engineering Society, U. S. A.

Light and Lighting, published by the Illuminating Engineering Society, London.

Lighting Research and Technology, published by the Illuminating Engineering Society, London.

Lighting Review, published by the Illuminating Engineering Societies of Australia.

The Building Services Engineer, the Journal of the Institution of Heating and Ventilating Engineers, London.

Thermal Abstracts, abstracts of papers relating to thermal research, published by the Heating and Ventilating Research Association, Bracknell, England.

As well, further information can be obtained from research papers, working papers, etc., which are published periodically by research organisations involved in environmental studies of building design.

Finally, it should be noted that this bibliography is intended as a reference guide for those involved in building services design; those wishing to become involved in the application of computers to this field; and, of course, for students who wish to study the subject of building environment and services design and the subsequent application of computer methods.

- MR3 J.S. GERO, M.R. ROSENMAN and P.M. ALEXANDER - Feasibility Structural Model Analysis of a 700 ft. high Tourist and Telecommunications Tower
- MR4 J.S. GERO and H.J. COWAN - Structural Concrete Models in Australia
- MR5 R.M. AYNLEY - The Growing Awareness of Environmental Aerodynamics
- MR6 J.S. GERO and M.H. KHAN - Comparison of Physical and Theoretical Models of a Continuous Curved Spine Girder Bridge
- MR7 A. FUNNELL, A. PUGH and R. YOUNG - A Selective Bibliography on Structural Models
- MR8 R.M. AYNLEY - A Low Cost, Low Speed Open Circuit Blower Wind Tunnel for Environmental Aerodynamics
- MR9 H.J. COWAN - Model Structure for the 150-inch Anglo-American Optical Telescope
- MR10 J.S. GERO - Structural Model Testing of MLC Centre Tower Building
- MR11 H.J. COWAN - What Can We Do With Structural Models?

EDUCATION REPORTS

- ER1 J.S. GERO - Undergraduate Architectural Science Theses - 1969 - University of Sydney
- ER2 J.S. GERO - Undergraduate Architectural Science Theses - 1970 - University of Sydney
- ER3 J.S. GERO - Post-graduate Research Theses in the Department of Architectural Science
- ER4 J.S. GERO - Undergraduate Architectural Science Theses - 1971 - University of Sydney

GENERAL REPORTS

- GR1 Post-graduate Study in Architectural Science - 1971-72
- GR2 J.G. LUCAS - Building Contracts - Documentation at Tender Stage
- GR3 H.J. COWAN - System Building
- GR4 H.J. COWAN - Why Concrete (R.O. Smee Memorial Lecture)
- GR5 Post-graduate Study in Architectural Science - 1973-74
